

HOLSTER & MAG CARRIER

OWNER'S MANUAL & MAINTENANCE GUIDE

Congratulations on your StealthGearUSA® purchase. In your possession is a premium, innovative concealed carry solution that will serve you well all day, every day when used correctly.

Please read and understand the following before carrying with your StealthGearUSA holster:

1. Use an **unloaded** firearm when testing the fit and retention of your holster.
2. Practice drawing and holstering with an **unloaded** firearm until you are comfortable doing both at normal speed.
3. **When drawing or re-holstering your firearm, keep your finger away from the trigger.** Keep your trigger finger straight and parallel to the firearm when drawing or holstering.
4. **There is rarely a good reason to re-holster quickly or in a rush.** Be aware of the situation. If there is no need to rush holstering your firearm, then take your time. **Remember to keep your finger straight, outside of the trigger guard, and away from the trigger.**
5. **It is the user's responsibility to maintain this holster.**

We recommend inspecting the screws, clips, and shell daily to ensure proper and safe function. The holster will not require daily maintenance but a habit of daily inspection will prevent long periods of time elapsing with zero maintenance being performed.

The best practice is to check your holster shell and hardware daily. If you would like to use threadlocker to assist with hardware retention, we recommend applying a small amount of medium or low-strength threadlocker (Blue or Purple strength) to the threads of each screw after you have determined your preferred level of retention. We DO NOT recommend using Red strength threadlocker. If you use this high strength threadlocker on your holster or mag carrier, you can cause damage to your holster platform that will not be covered by our warranty.

***Please Note:** When using threadlocker on your holster or mag carrier, it will make adjusting the retention more difficult. Make sure you check your desired level of retention before letting the threadlocker fully set. Threadlocker will take about 24-hours to cure to the level of strength listed on the bottle. After that time period, it will be more difficult to make adjustments to your holster.

HOW TO ADJUST RETENTION

1. Ensure your firearm is **unloaded**.
2. Put the holster on your waistband and insert the firearm in the holster – you should hear a soft “click” as the firearm is fully seated into the holster.
3. Draw the unloaded firearm to test the retention. Re-holster and draw again a few times to get a good feel for the retention and how you would like to adjust it.
4. Use a Phillips screwdriver to adjust accordingly, tighten or loosen the screws by 1/8 turns. Repeat steps until desired retention has been reached.

Inspect your holster daily to ensure the retention has not changed, screws are tight, and the shell and belt clips are secure.

We recommend wiping down the inside of your shell on a regular basis. This will help prevent dust, lint, and other particles from building up inside the holster shell.

After prolonged use, you may want to wash the holster platform. We recommend washing the holster in luke-warm, soapy water. Rinse then set in a cool, dry place to air dry. **Do not use a heat source to dry your holster. Hair dryers, space heaters, heat guns, radiators, etc. can deform and destroy your holster.**

Additionally, do not leave or store your holster where it will be exposed to high temperatures.

FAQ

What is a holster “shell”?

The holster shell is a thermoplastic sheet that has been custom molded for a specific firearm.

What is the holster “platform”?

The platform is the backing to which the holster shell is affixed. We offer two lines of platforms, Ventcore® and SG-Revolution™.

Are shells and platforms interchangeable between different firearms?

No, shells and platforms are custom designed to a specific firearm model. We strongly recommend that you DO NOT carry a firearm in a holster that was not specifically designed for that firearm.

I am having difficulty reassembling my holster after taking it apart. What should I do?

Please contact us via email or phone, and we will be happy to walk you through the reassembly process.

I do not have a Phillips screwdriver, can I use a power drill instead?

We DO NOT recommend using a power drill to remove or attach the shell or clips. Any damage to your platform that was caused by the use of a power tool is not covered under the warranty. See our warranty policy at stealthgearusa.com/warranty for more information.
